Labrador, standing: seam layout v2.1

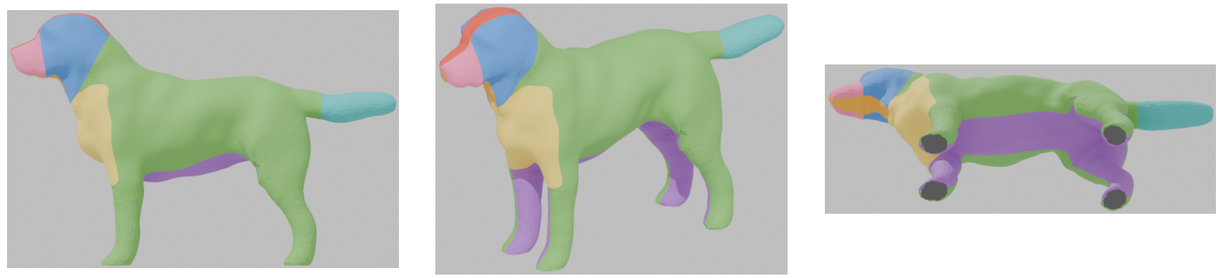

PROPOSAL FOR APPROVAL

Medium size: 350 mm nose to tail base. Drawn on base shape v0.4. 03 Nov 2026. Not for cutting: please answer the questions and send them back.

Current layout v1: 20 pieces

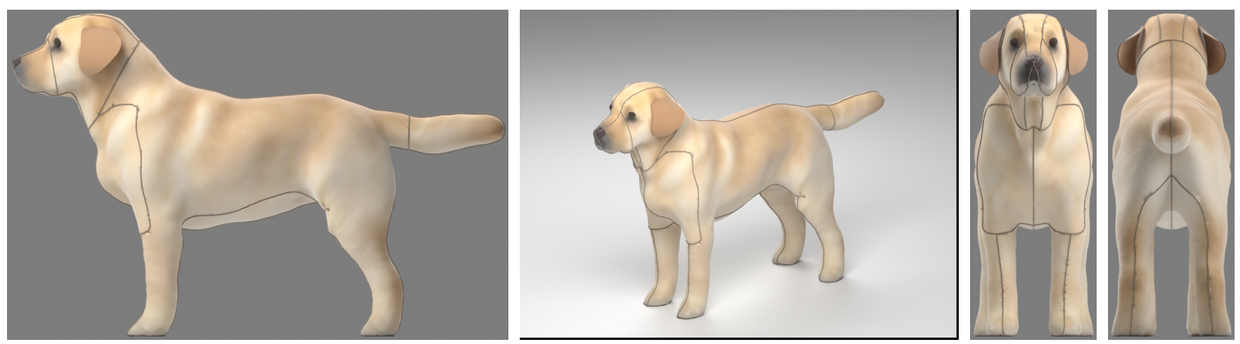

Proposed layout v2.1: 22 pieces (legs built like Cuddle Clones and Dragonmoss)

v2.1 colours

- P01 head gusset
- P02/03 side head
- P04 chin gusset
- P05/06 muzzle side
- P07/08 body side, with outside of legs
- P09/10 chest halves
- P11/12 underbody, with inside of legs
- P13-16 paw pads
- P17/18 tail
- P19-22 ears (flat, not shown)

What the finished plush should look like, with the v2.1 seams drawn in (on the plush they sit under the fur)

What changes from v1, and why

1. **Legs stay part of the body sides (outside) and the underbody (inside), as the competitors make them.**
   No ring seam at the elbow or knee, so the legs read as plush legs. Leg fur is trimmed short and brushed down.
2. **Chest in two halves with a centre seam, pile running down.**
   Like the competitors' short-coated dogs. In v1 the chest pile ran towards the tail (90 % off); now 6 %.
3. **Muzzle side pieces: seam from the stop, in front of the eye, to the corner of the mouth.**
   Both Cuddle Clones and Dragonmoss do this: sharper stop, fuller cheeks, a clean line for the short muzzle fur and the eye.
4. **Underbody in two halves with one centre seam underneath (v1 had four belly pieces).**
   Every piece stays within 9 % stretch when flattened (paw pads and tail apart).
5. **Darts instead of easing where a seam still needs more than about 3 mm of easing in 40 mm.**
   Positions come with the v2.1 pattern.
6. **Ears: a small pleat at the base so the ear turns forward and frames the face.**
7. **Unchanged: head gusset, chin gusset, centre-back seam, two-piece tail, paw pads.**

Fur direction check

Share of each area where the pile, once sewn, points more than 30 degrees away from a Labrador's coat direction. Legs and underside follow the competitor-style compromise; everything seen from the front and sides is close.

Area	v1 now	v2.1
Head	3 %	6 %
Body sides	9 %	8 %
Chest and shoulder fronts	**90 %**	6 %
Legs	**61 %**	**66 %**
Belly and inner thighs (underneath)	**42 %**	**83 %**
Tail	9 %	6 %

Cost

20 pieces become 22. Seam length at medium size 3.8 m to 4.1 m (+8 %). Fabric for the body pieces, seam allowance included: 2,165 cm2 to 2,199 cm2 (+2 %).

Questions on the layout

1. Legs as part of the body sides and underbody, like the competitors: OK?
   ☐ Yes ☐ No Comments: _____
2. Chest in two halves with a centre seam, pile running down: OK?
   ☐ Yes ☐ No Comments: _____
3. Head: A) muzzle side pieces as shown, or B) keep the v1 side head with a dart at the stop?
   ☐ A ☐ B Comments: _____
4. Darts instead of easing: OK? What is the most easing you are happy with in 40 mm of seam?
   ☐ Yes ☐ No Comments: _____
5. Paw pads come out about 26 mm across at medium. Separate pads (short pile or suede?), or close the leg end with a dart?
   ☐ Pads ☐ Dart Comments: _____
6. Ears: is a pleat at the base OK? (Lining in the same fur or a short pile? Please say in the comments.)
   ☐ Yes ☐ No Comments: _____
7. Do you already make a realistic dog you are happy with? Photos of its pattern pieces would help us.
   ☐ Yes ☐ No Comments: _____

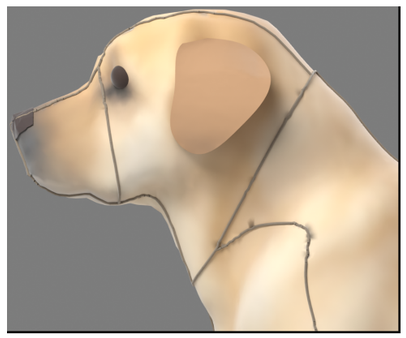

Making it look like the dog: colour, markings, fur and size

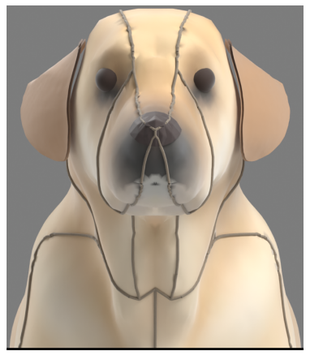

PROPOSAL FOR APPROVAL

Medium size: 350 mm nose to tail base. Drawn on base shape v0.4. 03 Nov 2026. Not for cutting: please answer the questions and send them back.

Colour and markings, read from the customer's photos

The coat colours were transferred from the photo-textured 3D model onto the plush shape. The white stock fur is airbrushed or dyed to match. A yellow Labrador's shading is darker on the ears, back and head and lighter underneath, as the breed standard describes.

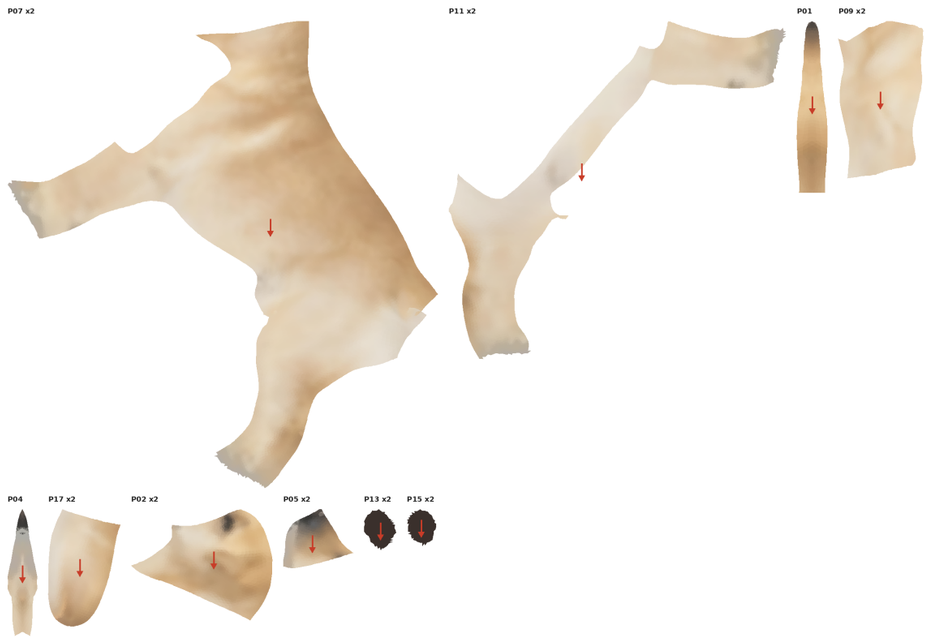

Paint colours (four tones plus ears), share of the body and where they go

- #E2D2BC 40 % mostly on: chest R, underbody R, body side R
- #DBC4A5 29 % mostly on: chin gusset, chest R, body side R
- #CCAE89 23 % mostly on: chin gusset, side head R, head gusset
- #B4926D 9 % mostly on: muzzle side R, head gusset, side head R
- #B38A64 ears (outer pieces)
- #3A302C paw pads (separate pad fabric, to the dog's pads)

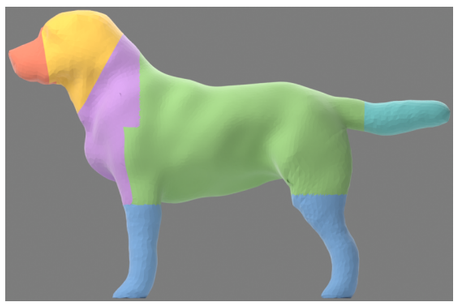

Markings rule: markings and shading are airbrushed on the white stock fur from the colour guide; where a customers dog has a crisp marking edge (white bib, blaze, socks) the nearest seam is moved onto that edge so the colour change hides it.

Baked-in ground shadow on the paws and belly in the 3D model has been lifted, so the feet are coat-coloured.

Colour guide on every piece (cutting orientation, pile down)

Fur trim zones

Fur type and trim lengths (medium size)

Stock fur: white acrylic pile on knitted polyester backing, straight and dense (not silky), pile at least 12 mm so the longest zone can be trimmed to length. Breed standard: coat short, straight and very dense, giving a fairly hard feeling to the hand; soft silky coats ... not typical.

muzzle	**4 mm**	shortest, velvety, like the competitors' short-pile muzzles
head and ears	**5 mm**	short and smooth; ears both sides
legs	**6 mm**	short, brushed downwards
body	**8 mm**	standard coat; brushed back and down
neck and chest	**10 mm**	slightly fuller at the neck and chest
tail	**8 mm**	thick all round, no feathering (otter tail)

Blend each zone into the next over about 10 mm. Lengths are starting values for the first sample.

Size

The plush is the dog at one scale; fur lengths scale with it. At 350 mm the thinnest lower-leg and tail sections (21 and 21 mm at true proportions) are raised to the 25 mm tube minimum, which gives the slightly fuller plush legs the competitors have. From about 430 mm the dog keeps its true proportions everywhere.

Questions on the finish

8. Can you source a white, straight, dense (not silky) acrylic pile of at least 12 mm? Which pile lengths do you stock?
☐ Yes ☐ No Comments: _____

9. Can you trim to these zone lengths (4 to 10 mm)? Which clipper guards do you use?
☐ Yes ☐ No Comments: _____

10. Can you airbrush or dye the white fur to these four tones and the shading on the colour guide?
☐ Yes ☐ No Comments: _____

11. When a dog has a crisp marking (white bib, blaze, socks), is it OK to move the nearest seam onto the marking edge?
☐ Yes ☐ No Comments: _____

Defaults until you confirm them: seam allowance 5 mm; narrowest turnable tube 25 mm; tightest curve 3 mm; smallest piece 25 mm; roll width 1500 mm; laser files DXF in mm, cut and notch on separate layers (RDWorks / LightBurn). Pieces laid at 0 or 180 degrees only.
