English bulldog, standing: seam layout

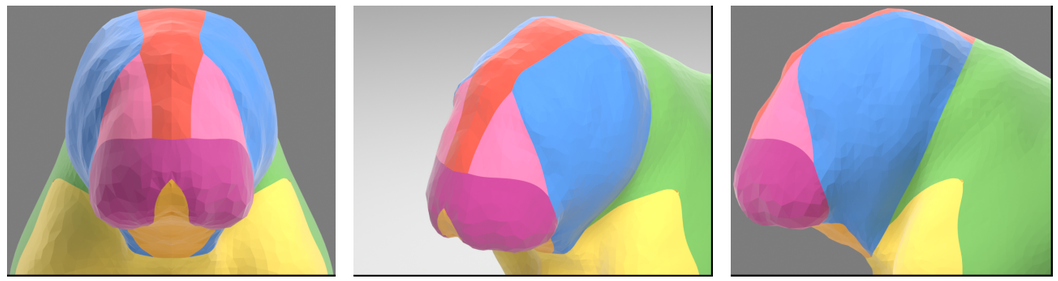

PROPOSAL FOR APPROVAL

Medium size: 350 mm nose to tail base. The dog base shape v0.4 reshaped onto a brindle-and-white English bulldog. 03 Nov 2026. Not for cutting: please answer the questions and send them back.

The Labrador's layout v2.1 reshaped for the bulldog (same piece numbers), plus a pair of jowls: 24 pieces

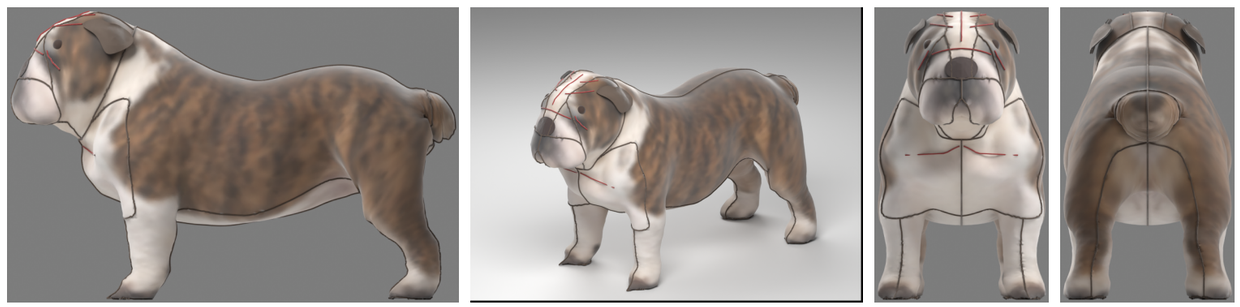

Bulldog face: jowls, muzzle tops and the undershot chin

- P01 head gusset
- P05/06 muzzle top
- P09/10 chest halves
- P17/18 tail stub
- P02/03 side head (1 dart each)
- P23/24 jowls (3 darts each)
- P11/12 underbody, with inside of legs
- P19-22 rose ears (flat, not shown)
- P04 chin / lower lip
- P07/08 body side, with outside of legs
- P13-16 paw pads

What the finished plush should look like: seams in brown, needle-sculpted wrinkles in red (under the fur on the plush)

What the competitors do on bulldogs

1. **Jowls are their own stuffed lobes; the lower lip / chin sits below and between them.**
   Cuddle Clones customer photos, a pattern designer's bulldog (jowls, lips, chin pieces), Dragonmoss ('undershot lower lip').
2. **The nose rope is either sewn in as a folded strip (pattern designer, Dragonmoss) or sculpted and shaded (Cuddle Clones).**
3. **Legs belong to the body; chest has a centre seam; brindle and white are airbrushed on one fur.**
4. **Their customers' main complaint on bulldogs: wrinkles not deep or dark enough.**
   Two Cuddle Clones reviews ask for deeper, darker head wrinkles.

What is new for the bulldog, and why

1. **Same pieces as the Labrador (frozen layout), reshaped onto the bulldog: the pattern and the job card read the same for every dog.**
   The base shape was fitted to the bulldog with every vertex kept (surface within 0.4 mm, 95 % of points).
2. **Face module for flat-faced breeds: the muzzle side splits along the jowl crease into a small muzzle top and a jowl.**
   The jowls meet under the nose (philtrum seam; the nose covers the meeting point). Each jowl has 3 small darts along its lower edge, where it curls under: stretch 15 % without, 5 % with.
3. **The chin gusset becomes the chin / lower lip and shows between the jowls at the front, as on an undershot bulldog.**
4. **Side head: one dart each on top of the skull, from the head gusset seam out over the brow (it can hide in a forehead wrinkle).**
   Stretch 8 % without, 6 % with.
5. **Tail: a short thick stub set on the rump, carried back and down (breed standard), in two halves.**
   30 mm wide at medium. The rounded tip needs a little gathering.
6. **Rose ears: small flat ear pieces, folded back and tacked by hand after sewing.**

Fur direction check

Share of each area where the pile, once sewn, points more than 30 degrees away from the dog's coat direction.

Area	Labrador	Bulldog
Head	6 %	9 %
Body sides	8 %	6 %
Chest and shoulder fronts	6 %	12 %
Legs	**66 %**	**69 %**
Belly and inner thighs (underneath)	**83 %**	**75 %**
Tail (short stub)	6 %	**53 %**

Cost and stretch

Labrador 22 pieces, bulldog 24 (8 darts). Seam length at medium 4.1 m vs 4.3 m; fabric for the body pieces, seam allowance included, 2,199 cm2 vs 2,372 cm2 (a bulldog is shorter but much wider). The barrel chest and heavy thighs stretch the body side, chest and underbody up to 12 % at the flank and inner thigh (Labrador 9 %).

Questions on the layout

1. Same layout as the Labrador, reshaped for the bulldog (same piece numbers): OK?
   ☐ Yes ☐ No Comments: _____
2. Jowls as their own pieces with small darts, meeting under the nose: OK?
   ☐ Yes ☐ No Comments: _____
3. Nose rope: A) needle-sculpted and shaded (as shown), or B) a folded strip sewn into the seam above the jowls?
   ☐ A ☐ B Comments: _____
4. Up to 12 % stretch at the flank and inner thigh: OK with this backing, or would you add a dart there?
   ☐ Yes ☐ No Comments: _____
5. Tail stub in two halves with the tip gathered: OK? (A curled screw tail is possible for dogs that have one.)
   ☐ Yes ☐ No Comments: _____
6. Rose ears folded back and tacked by hand: OK? Lining in short pile or the same fur?
   ☐ Yes ☐ No Comments: _____

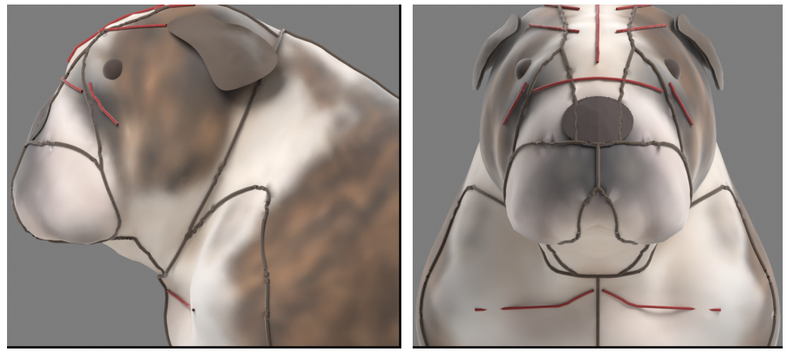

Making it look like the dog: colour, markings, wrinkles, fur and size

PROPOSAL FOR APPROVAL

Medium size: 350 mm nose to tail base. The dog base shape v0.4 reshaped onto a brindle-and-white English bulldog. 03 Nov 2026. Not for cutting: please answer the questions and send them back.

Colour and markings, read from the customer's photos

Colours transferred from the photo-textured 3D model onto the plush shape. The white stock fur stays white where the dog is white; the brindle is airbrushed in stripes following the colour guide.

Paint tones (share of the body and where they go)

- #D5CAC1 27 % white: leave the fur unpainted
- #A89588 17 % mostly on: tail R, underbody R, muzzle top R
- #7B624E 32 % mostly on: body side R, tail R, side head R
- #5B473A 25 % mostly on: side head R, body side R, tail R
- #57483D ears (outer pieces)
- #3A302C paw pads (separate pad fabric)

Markings rule, on this dog

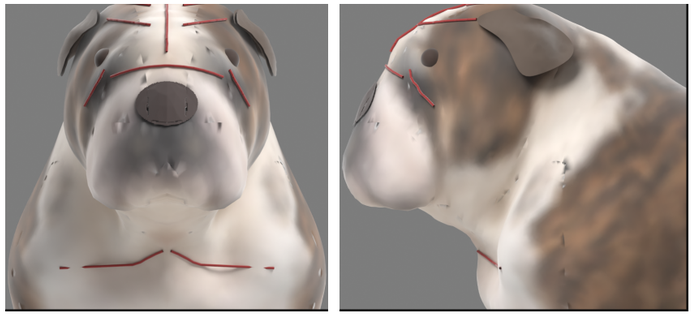

Head gusset: over the forehead its edges already sit on the white blaze (within 2 mm). Behind the eyes the blaze narrows and stops, so the gusset there is airbrushed. Chest: the brindle starts 10-16 mm in front of the chest seam. Moving that seam forward onto the bib edge would hide the colour change in the seam (or the brindle is airbrushed on the outer strip of the chest pieces).

To check on the first sample: eye and nose positions (read from the photos), how full the jowls stand, the rose-ear fold, and the gathered tail tip. The automatic face check against the photos was not used for this dog: its white blaze, muzzle and chest blend into the white studio background, so the photo outline is unreliable there; the 3D model built from all four views is used instead.

Colour guide on every piece (cutting orientation, pile down)

Wrinkle map (needle-sculpted; the shape itself stays smooth)

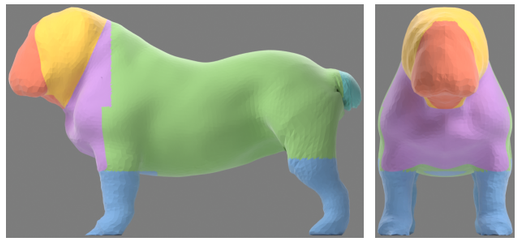

Wrinkle	Length	Depth	Extra fabric across it
nose rope	54 mm	4 mm	6 mm, across the muzzle tops and head gusset
forehead furrow	52 mm	3 mm	4 mm, across the head gusset
forehead wrinkles (x4)	27 mm	2 mm	3 mm, across the side heads
under-eye folds (x2)	22 mm	2 mm	3 mm, across the side heads
dewlap folds (x2)	50 mm	2 mm	3 mm, across the chest halves

Shade each crease darker with the airbrush as well (competitor reviews ask for deeper, darker wrinkles). Depths and extra fabric are starting values.

Fur type and trim lengths (medium size)

Stock fur: white acrylic pile on knitted polyester backing, short, dense and smooth (not shaggy), pile at least 8 mm so the longest zone can be trimmed to length. Breed standard: coat short, close and smooth, fine in texture.

muzzle	**3 mm**	shortest, velvety: jowls, muzzle tops, chin
head and ears	**4 mm**	short and smooth so the wrinkles read; ears both sides
legs	**5 mm**	short, brushed downwards
body	**6 mm**	standard coat; brushed back and down
neck and chest	**6 mm**	same as the body: a bulldog has no ruff
tail	**5 mm**	short stub, smooth

Size

At 350 mm every leg is already wider than the 25 mm tube minimum (narrowest 28 mm), so the bulldog keeps its true proportions at every size. Only the tail stub is set at the minimum (30 mm wide). Fur lengths scale with the plush size.

Questions on the finish

7. Can you source a white, short, dense, smooth acrylic pile of at least 8 mm? Which pile lengths do you stock?
   ☐ Yes ☐ No Comments:

8. Can you trim to these zone lengths (3 to 6 mm)?
   ☐ Yes ☐ No Comments:

9. Can you airbrush brindle stripes from the colour guide, and leave the white areas unpainted?
   ☐ Yes ☐ No Comments:

10. Needle-sculpting: are these wrinkle depths and the extra fabric right? Do you add the extra fabric to the pattern yourself?
    ☐ Yes ☐ No Comments:

11. On this dog, move the chest seam forward onto the edge of the white bib: OK?
    ☐ Yes ☐ No Comments:

Defaults until you confirm them: seam allowance 5 mm; narrowest turnable tube 25 mm; tightest curve 3 mm; smallest piece 25 mm (the front paw pads come out 24 mm: pad fabric); roll width 1500 mm; laser files DXF in mm, cut and notch on separate layers (RDWorks / LightBurn). Pieces laid at 0 or 180 degrees only.
